

Agent-Powered business process automation

Course Overview

Duration - 12 Hours | Level - Intermediate

Join this event to learn the latest on leveraging Microsoft AI-powered low code tools to boost efficiency and accelerate innovation. During this 3-day long workshop with hands-on labs you will learn to set up organization-wide hyperautomation with new AI features in Power Automate. You will understand how to securely optimize processes using multiple solutions like process and task mining, digital and robotic process automation (DPA and RPA), and intelligent document processing. You will also learn about the Automation Kit for managing, governing, and scaling automation platform adoption based on best practices.

Course Modules

Day 1

Create agents with Copilot Studio

Microsoft Copilot Studio overview

Capabilities of Copilot Studio

Build agents with Microsoft Copilot Studio

Enhance productivity with Generative AI

Test and publish agents in Copilot Studio

Hands on Labs

Building an agent Microsoft Copilot Studio with the new AI capabilities

Create an agent to help users learn about Copilot Studio

Create an agent to answer employee questions about expense policies

Day 2

Enhance Copilot Studio agents with Power Automate

Improve business productivity with Power Automate

Create flows with Power Automate

Create Agent Flows in Copilot Studio

Use agent flows with your agent

Hands on Labs

Create an automated cloud flow

Build an agent flow with natural language

Designing a smart autonomous agent for recruitment workflows
